OBERWEIS SMALL-CAP OPPORTUNITIES FUND INVESTOR CLASS (OBFOX) INSTITUTIONAL CLASS (OBSIX)

4Q 2018

The Quarter & Year in Review

The Oberweis Small-Cap Opportunities Fund returned -7.23% versus -9.31% for the benchmark Russell 2000 Growth Index in 2018, an outperformance of 208 basis points. During the fourth quarter, the Small-Cap Opportunities Fund returned -21.41% versus -21.65% for the benchmark, an outperformance of 24 basis points.

Clearly 2018 was a challenging year for equity managers globally, and the environment for U.S. small-cap stocks was one of the more difficult sub-markets. Although growth stocks outperformed value stocks during the year, they lagged during the fourth quarter¹. Eclipsing any benefit from our growth bias was a negative capitalization impact. During 2018, small-cap growth stocks underperformed large-cap growth stocks by 780 basis points².

More challenging for the portfolio was the underperformance of stocks exhibiting upward estimate revisions. Philosophically, we seek to identify companies that have experienced a significant positive earnings surprise and which we expect will generate above-consensus results going forward due to a material fundamental misunderstanding. Over time, these companies usually experience upward estimate revisions as a result, and such companies can generate outsized price appreciation as other investors begin to understand the true earnings power of the company. During 2018, however, investors shunned these companies, as shown below by the graph of MSCI Barra's "Sentiment" factor performance. Barra's Sentiment factor measures analyst revision ratios and changes in analyst-predicted P/E ratios and is a good proxy for companies reporting earnings surprises; our portfolio has historically had a large positive exposure to this factor. Exposure to this factor in 2018 represented a major drag on our performance, but we remain confident that positive estimate revisions remain a solidly positive factor over the intermediate- to long-term.

A year ago we noted the complacency in the market and surmised that a more tumultuous environment "could be in the offing" in 2018. Volatility, as measured by the CBOE's VIX Index, exploded in 2018, eclipsing 50 in early February and spiking again at year-end as the market collapsed in December. There was really nowhere to hide as the U.S. market, non-U.S. developed markets, and emerging markets posted negative returns around the world. Additionally, asset classes outside of equities generated negative returns, leaving cash as the only positive asset class and safe haven.

Returns were decidedly negative against a backdrop of reasonable economic data and company-specific fundamentals in the U.S. S&P 500 operating earnings hit a record high in 2018 on record profit margins, and we expect earnings growth (albeit at a slower rate) to continue in 2019. Inflation, long in the Fed's cross-hairs, remains essentially in line with the target rate of 2%. The manufacturing Purchasing Managers' Index still registered an expansionary reading of 53.8 in December despite market skittishness and more sluggish manufacturing activity in China, Taiwan, Korea, Mexico, and parts of Europe (France and Italy).

¹For 2018, the Russell 2000 Growth Index and the Russell 2000 Value Index returned -9.31% and -12.86%, respectively. For the fourth quarter, the Russell 2000 Growth Index and the Russell 2000 Value Index returned -21.65% and -18.67%, respectively.

²For 2018, the Russell 1000 Growth Index returned -1.51%.

4Q 2018

Investors became increasingly fearful as the year wore on, as concerns over rising interest rates, tighter monetary policy, slowing economic growth in international markets and U.S. trade policy were compounded. By year-end, investors were particularly concerned that the resulting “bear market” (if we define a bear market as a decline of over 20%) could portend a recession. Although U.S. equities by this definition did enter a bear market late in 2018, not all “bear markets” are associated with a recession. In fact, small-cap bear market declines in excess of 20% in 1998, 2010, 2011, and 2015-2016 all occurred during non-recessionary economic environments. Furthermore, while no one can predict the future, negative calendar year returns for the Russell 2000 Growth have often resulted in positive returns in the subsequent calendar year (except for the bear market period following the Internet bubble).

There was also much discussion of an “inverted yield curve” predicting an imminent recession. While it’s true that parts of the yield curve are currently inverted (such as the 5-year and 2-year), we consider the 10-year and 2-year yield spread to be the more meaningful indicator, and it has yet to turn negative. Importantly, inversion of the 10/2 spread does not portend an immediate recession; the last time the 10/2 spread inverted was in December 2005, and the Great Recession officially started in December 2007 – some two years later. The Russell 2000 Growth Index returned in excess of 20% over that time period³, so the inversion obsession may not predict much of anything.

In our view, what we’re left with as we enter 2019 is an above-average investment opportunity for long-term investors and likely the most compelling opportunity we’ve seen since late 2011. Fear at the end of 2018 was palpable; a number of sentiment measures we track were at extreme fear levels last seen in early 2016 or late 2011. Some measures, such as the substantial global equity outflows witnessed at the end of the year, were at the highest levels witnessed since the global financial crisis in 2008.

³The Russell 2000 Growth Index returned 20.4% from 11/30/2005 through 11/30/2007.

4Q 2018

Our contrarian view based on sentiment is supported by valuations. The P/E of our investable universe⁴ is now 26% below what we observed entering 2018, and the S&P 500 P/E finished the year at its lowest level since 2013, which we believe more than adequately discounts the risks discussed above. Some of those risks appear to already be abating. Interest rates have declined, with the 10-year U.S. Treasury yield closing under 2.7% at year-end compared to a peak in early October of more than 3.2%. Recent Federal Reserve comments have been less hawkish and Fed Funds futures currently project no additional rate hikes in 2019 versus expectations of four 2019 hikes just weeks ago, a significant move that exemplifies the major shifts in sentiment that occurred late last year. The trade dispute between the U.S. and China has possibly peaked and is entering a critical negotiation phase with heightened levels of motivation as President Trump hopes to stem a declining stock market and Chinese President Xi reacts to a weakening Chinese economy. Although it's dangerous to predict the potential timing of a resolution, we do believe equity markets would react favorably to any agreement that provides more certainty on trade.

That said, we still believe the biggest risk to equity markets – as we noted last quarter – lies with debt and interest rates. The unwind of quantitative easing represents uncharted territory, and it's not entirely clear how the Fed's balance sheet reduction strategy will impact the economy, the equity market, and the bond market. Fed Chairman Powell will need to walk a fine line as he attempts to normalize monetary policy without disproportionately disrupting capital markets in the process. We expect markets will continue to be hyper-sensitive to his comments for the foreseeable future, although given the broadly negative stock market performance during the fourth quarter, some of this is likely already priced in.

While headlines and investor risk appetites can change on a whim in the short-term, our bottom-up strategy has always been focused on investing in businesses with idiosyncratic attributes that afford the potential for earnings growth to surprise to the upside. These companies are often undergoing a transformational change or event that we believe is potentially misunderstood or underestimated by the consensus. While the earnings multiples afforded such companies can oscillate from quarter to quarter, we believe that prudent stock selection of a diversified portfolio of companies with prospects for better-than-expected earnings growth is likely to outperform the broader market over the long-term.

⁴Our micro-cap and small-cap combined investable universe consists of all U.S. companies with market capitalizations less than \$5 billion that reported an earnings surprise of 10% or more in the latest reported quarter. The median forward 12-month P/E ratio for our universe stood at 19.9x on 12/28/2017 and at 14.6x on 1/3/2019.

4Q 2018

Fund Highlights

As of December 31, 2018, the Fund was 95.7% invested in 76 different positions. The Fund had its largest weightings in health care (21.9% average weighting during the quarter versus 25.8% for the Russell 2000 Growth Index), producer durables (17.8% versus 15.6%) and consumer discretionary (17.8% versus 18.2%). In addition to health care, the Fund was most underweight consumer staples (0.0% versus 2.7%) and energy (0.4% versus 2.1%).

Fourth quarter performance was positively impacted by stock selection in health care (where our holdings returned -18.18% versus a return of -25.56% for the benchmark's health care holdings) and materials & processing (-20.30% versus -25.00%). Selections in producer durables (-27.95% versus -21.04%), consumer discretionary (-24.99% versus -19.77%), and financials (-18.51% versus -16.45%) were a drag on performance. For the full year, the stock selection effect was positive and was led by picks in healthcare, consumer discretionary, and materials & processing.

FUND CHARACTERISTICS (AS OF DECEMBER 31, 2018)

Number of Stocks	76
Weighted Market Capitalization (in millions)	\$2,385
Median Market Capitalization (in millions)	\$1,727

Key Benefits

The Small-Cap Opportunities Fund seeks to capitalize on the exceptional growth potential of smaller companies that are often misunderstood by traditional Wall Street research analysts. The Oberweis Small-Cap Opportunities Fund invests, under normal circumstances, at least 80% of its net assets in the securities of companies (with market capitalizations less than \$5 billion at the time of investment) where our expectations for earnings growth differ from consensus expectations. These companies often boast exciting products and/or services, a strong and sustainable competitive position, and the potential for upward revisions in earnings expectations in the future. Our fundamental research process is specifically designed to efficiently identify such opportunities.

The potential key benefits of the Small-Cap Opportunities Fund are:

- Potential for significant alpha over a full market cycle
- Combines empirically-proven Behavioral Finance principles with the very best of fundamental bottom-up research
- Disciplined and repeatable investment process managed by a passionate and experienced investment team
- Fundamental research process specifically designed to efficiently discover smaller cap companies that are misunderstood by traditional Wall Street research analysts
- Exposure to smaller cap companies offering the potential for earnings growth that differs from consensus expectations
- Diversified portfolio with a focus on risk management

The Oberweis Funds invest in rapidly growing smaller and medium sized companies which may offer greater return potential. However, these investments often involve greater risks and volatility. There is no guarantee that the portfolios can achieve their objectives.

Minimum Investment:

Oberweis Small-Cap Opportunities Fund Investor Class (OBSOX):
 \$1,000 non-IRA, \$500 IRA

Oberweis Small-Cap Opportunities Fund Institutional Class (OBSIX):
 \$1.0 million

Oberweis Asset Management, Inc.

Recognized as a leading small-cap stock specialist, Oberweis has been helping institutional investors manage their assets prudently and effectively for many years.
