The Fund's past performance is not a good predictor of the Fund's future performance.

The Fund's performance assumes the reinvestment of all dividends and all capital gains. Index returns assume reinvestment of dividends and, unlike the Fund's returns, do not reflect any fees or expenses. If such fees and expenses were included in the Index returns, the performance would have been lower. Please note that one cannot invest directly in an unmanaged index.

The MSCI ACWI Small-Cap Index (Net) is a free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of small-cap developed and emerging markets with dividends reinvested net of withholding tax. The MSCI EAFE Index is an equity index that captures large and mid-cap representation across 21 developed markets countries around the world, excluding the U.S. and Canada. The index is a broad-based index covering approximately 85% of the free-float-adjusted market capitalization in each country with minimum dividends reinvested net of withholding tax. The Indexes are unmanaged and not available for investment.
